Roy, and H. In summer, the daily low temperature has increased more than the daily high temperature.

Are you sure you would like to remove these items from your wishlist?

Finally, we thank the Alaskan boreal forest itself for providing such a magnificent place to work. Quat Res – USA.

As the glaciers receded they left depressions in the topography that have since become the Siberian taiga. The results also indicate that ground scarification had few significant effects on white spruce basal area or stem density.
